

TRACHOMA CALCULATION

Spreadsheet Documentation

Definitions

- WHO region: designated regions provided by the World Health Organization¹
- DALY: Disability-Adjusted Life Years (D)
 - Years of life taken by disease from population if it was in a healthy state free from disease
- Treatment Coverage (θ):
 - Ratio between number of people receiving treatment to the estimated number of people needing treatment
- Efficacy (e):
 - Percentage of population receiving treatment that were actually cured
- Data generated from WHO, UNAID database

¹http://www.who.int/neglected_diseases/preventive_chemotherapy/sch/en/

Impact Formula

$$I = \frac{D * e * \Theta}{1 - e * \Theta} * p$$

- Where:
 - D = DALYs
 - e = Efficacy
 - Θ = Treatment Coverage
 - p = Prevalence

Treatment Guidelines

To determine which mass drug intervention was initiated in each country we applied two algorithms provided by the WHO's PCHH found on pages 16 and 17. The visualization of these algorithms is found to the right.

Impact of Azithromycin in Algeria in 2017

Let's calculate the impact of Azithromycin in Algeria in 2017.

$$I = \frac{2,289.04 * 85.83\% * 85.57\%}{1 - 85.83\% * 85.57\%}$$

DALYs = 2,289.04

Efficacy = 85.83%

Treatment Coverage = 85.57%

Prevalence = .000051%

Using this equation we arrive at **the final impact of Azithromycin in Algeria in 2017: 6332.15**
